

GESTRA® Control Valves · Product Range Group A4

ZK 29

20SPPO29

Control Valve ZK 29 with Radial Stage Nozzle

PN 160

DN 25, 50, 80, 100, 150 mm (1, 2, 3, 4, 6")

Control valve for operation at high differential pressures.

Application, for example, in industrial plants and power stations as

- Injection-cooling valve
- Warm-up valve
- Drain valve
- Continuous blowdown valve
- Feedwater control valve
- Leak-off valve
- Steam control valve

The pressure drop is decreased in the radial stage nozzle in several stages, so that the flow velocity is reduced leading to a considerable reduction in wear and noise (sound level 80 dB (A)).

Straight-through valve with yoke, spindle with plug and radial stage nozzle. On request also available as angle valve.

Internals (incl. seat) completely exchangeable. Leak rates in accordance with DIN 3230 BO 1.

Optional items:

- Inlet of sealing fluid
- Self-tightening stuffing box
- Adjustable lift limitation in the closing direction
- Sample valve

Pressure/Temperature Rating

PMA (Maximum allowable pressure)	[barg] [psig]	160 2320	100 1450	62 900
TMA (Maximum allowable temperature)	[°C] [°F]	300 572	510 950	530 985
ΔPMX (Maximum differential pressure)	[bar] [psi]		100 1450	

Differential pressure = inlet pressure minus outlet pressure

Materials	
Body, DN 25, 50 mm (1, 2")	forged alloy steel 13 CrMo 4 4 (DIN No.1.7335)
Body, DN 80, 100, 150 mm (3, 4, 6")	cast steel GS-17 CrMo 5 5 (1.7357) butt-weld ends, however, 13 CrMo 4 4 (1.7335)*
Spindle	stainless steel X 35 CrMo 17 (1.4122)
Valve plug and seat	stainless steel X 90 CrMoV 18, tempered (1.4112)

*) On request, at extra cost butt-weld ends of other materials and dimensions by welding of pipe ends.

The control valve is suited for the following actuators:

1. ZK 29/01
Manual operation, not convertible
(only DN 25–80 mm \triangleq 1–3")
2. ZK 29/13
Electric linear actuator
3. ZK 29/14 (Standard)
Design with insert bush for fitting an electric rotary actuator or a handwheel
4. ZK 29/20
Pneumatic diaphragm actuator
5. ZK 29/30
Lever without quarter-turn actuator fitted
6. ZK 29/31
Lever for fitting a quarter-turn actuator

Connections

Butt-weld ends (Standard)
Flanges to DIN, PN 160 (BS 4504, table 160); on request flanges with dimensions to PN 40, 63 or 100, overall length, however \triangleq PN 160.

Special connections on request.

Example of Application

Calculation of required k_v value*)

1. For water flowrates within temperature ranges where flashing because of pressure drop is not to be expected (e.g. leak-off and injection-cooling valves) the calculated k_v value has to be multiplied by a correction factor taken from the chart below due to the successive expansion. The chart includes a safety factor of 1.2.
2. If, due to the pressure drop, flashing is to be expected, the formulae below should not be used to calculate the k_v value. In this case see overleaf for hot water capacity charts. If p₂/p₁>0.5 multiply the chart reading by the correction factor K taken from the backpressure chart below. The safety factor of 1.2 must always be taken into consideration.
3. For steam the calculated k_v value has to be multiplied by a safety factor of 1.2.

Pressure drop	k _v	for liquids		for gas, temperature-corrected	for vapours	for saturated and wet steam
$\Delta p < \frac{p_1}{2}$ $\left(p_2 > \frac{p_1}{2}\right)$	k _v	$= \frac{\dot{V}}{31.6} \sqrt{\frac{p_1}{\Delta p}}$	$= \frac{\dot{m}}{31.6 \sqrt{p_1 \cdot \Delta p}}$	$= \frac{\dot{V}_N}{514} \sqrt{\frac{p_N \cdot T_1}{\Delta p \cdot p_2}}$	$= \frac{\dot{m}}{31.6} \sqrt{\frac{v}{\Delta p}}$	$= \frac{\dot{m}}{31.6} \sqrt{\frac{v \cdot x}{\Delta p}}$
$\Delta p > \frac{p_1}{2}$ $\left(p_2 < \frac{p_1}{2}\right)$	k _v			$= \frac{2 \dot{V}_N}{514 \cdot p_1} \sqrt{p_N \cdot T_1}$	$= \frac{\dot{m}}{31.6} \sqrt{\frac{2v}{p_1}}$	$= \frac{\dot{m}}{31.6} \sqrt{\frac{v \cdot x \cdot 2}{p_1}}$

*) Conversion Factors: C_v (U.S.) = 1.17 · k_v
C_v (U.K.) = 0.98 · k_v

Nomenclature:

k _v	Valve flow coefficient for fully open valve within control range	[m³/h]
\dot{V}	Flowrate	[m³/h]
\dot{m}	Flowrate	[kg/h]
\dot{V}_N	Volume flowrate for gases at standard state (0°C, 1013 mbar)	[m³/h]
p ₁	upstream pressure	[bar a]
p ₂	downstream pressure	[bar a]
Δp	pressure drop p ₁ - p ₂	[bar]
ρ ₁	density of fluid with operating condition at T ₁ and p ₂	[kg/m³]
ρ _N	density of gases at standard state (0°C, 1013 mbar)	[kg/m³]
v	specific steam volume at T ₁ and p ₂ or - if Δp > $\frac{p_1}{2}$ - at $\frac{p_1}{2}$	[m³/kg]
T ₁	absolute inlet temperature of fluid	[K]
	Content of dry saturated steam in wet steam	(0 < x ≤ 1)

Capacity Charts

The charts indicate the maximum capacities of hot and cold water (condensate) the valve can discharge in continuous operation with the spindle in the utmost control position and linear characteristic.

Within their control range the valves (in all sizes) have a linear characteristic. For special operating conditions the adjustment of the radial stage nozzle can be modified to obtain different K_{vs} values and consequently flowrates varying from those indicated in the charts opposite. The linear characteristic is, however, maintained.

It is also possible the change the lift-flowrate characteristic from linear to equal-percentage by repositioning nozzle rings.

The following test certificates can be issued on request, at extra cost:

In accordance with EN 10204-2.1, -2.2, -3.1A, -3.1B and -3.1C.

All inspection requirements have to be stated with the order. After supply of the equipment certificates can no longer be established. Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our leaflet "Test and Inspection Charges for Standard Equipment". For other tests and inspections than those listed above, please consult us.

Supply in accordance with our general terms of business.

Technical modifications reserved.
